FOUNDER / ORGANISATION INTERIM EVALUATION

Please rate the student by entering a score from 1 to 5 against each criterion. Please find the Rating scale below:

Rating Scale

Rating	Description
1	Needs Significant Improvement
2	Below Expectations
3	Meets Expectations
4	Exceeds Expectations
5	Outstanding

A. PROJECT-RELATED SKILLS

S. No.	Evaluation Criterion	Rating out of 5
1	Project Understanding and Scope Clarity	
2	Logical and Analytical Thinking	
3	Problem-Solving and Practical Application	
4	Work Quality and Attention to Detail	
5	Initiative, Ownership and Resourcefulness	
6	Task Completion and Deadline Adherence	

B. SOFT SKILLS

S. No.	Evaluation Criterion	Rating out of 5
1	Communication and Responsiveness	
2	Professionalism and Work Ethics	
3	Reliability and Accountability	
4	Collaboration and Teamwork	
5	Feedback Acceptance and Adaptability	

C. OVERALL INTERIM EVALUATION

Kindly tick the option that best reflects the student's overall performance during the interim project period.

- ☐ Outstanding
- ☐ Exceeds Expectations
- ☐ Meets Expectations
- ☐ Below Expectations
- ☐ Needs Significant Improvement

Additional Remark / Feedback (if any about the student):

STRUCTURE OF THE REPORT

1] Organisation Overview

Aashirwad Consulting Solutions Private Limited is a consultancy firm that provides professional advisory and business support services to individuals and organizations. The firm aims to deliver reliable, client-centric, and technology-enabled consulting solutions. To strengthen its digital presence and improve accessibility for clients, the organization initiated the development of a modern, informative, and user-friendly website.

The website is intended to showcase the firm's services, expertise, leadership team, and contact channels while establishing a strong online identity. It will also serve as a platform to enhance client engagement, improve credibility, and support future digital marketing initiatives.

2] Project Background & Problem Statement

The organization required a modern website that effectively represents its brand, communicates its services, and provides a seamless user experience. The existing online presence was limited and did not adequately reflect the firm's capabilities or facilitate client interaction.

The primary objective of this project is to design and develop a responsive, secure, and scalable website from scratch. The website should be visually appealing, easy to navigate, and optimized for future enhancements such as SEO, analytics integration, and additional service pages. As part of the project, emphasis has also been placed on creating a structured website architecture that supports long-term maintenance and growth.

3] Work Done Till Date

During the current phase of the project, the following tasks have been completed:

- Conducted requirement gathering and discussions to understand the organization's objectives and website expectations.
- Planned the website structure, navigation flow, and page hierarchy.
- Designed the overall layout and user interface for the website.
- Developed the website framework using HTML.
- Created the initial web pages, including the homepage and key informational sections.
- Structured reusable components such as the header, navigation bar, footer, and content sections.
- Ensured the website follows a clean and organized coding structure for future development.
- Performed initial testing to verify page structure, navigation flow, and content placement.

At this stage, the foundational structure of the website has been established, providing a strong base for the remaining development work.

4] Progress & Key Learnings

The project has successfully progressed from the planning stage to the initial development phase. A structured HTML framework has been developed, and the overall website architecture has been defined.

Throughout this phase, I gained practical experience in understanding client requirements, translating business objectives into website design, and organizing web content in a logical manner. I also strengthened my understanding of HTML-based website development, page structuring, responsive design considerations, and professional documentation practices. Additionally, I learned the importance of planning website architecture before implementing advanced features.

Current Completion Status:

- Requirements gathering and project planning completed.
- Website architecture and page hierarchy finalized.
- HTML development of core web pages completed.
- Basic website framework and navigation structure implemented.
- CSS styling, responsive design, and JavaScript functionality are currently in progress.
- Backend integration, security implementation, testing, and deployment are scheduled for the next phase.

Overall Project Progress: Approximately **40–45%** completed.

The project is progressing according to the planned timeline, with the remaining phases focused on enhancing the website's functionality, responsiveness, security, and preparing it for deployment.

5] Next Steps

The following activities are planned for the next phase of the project:

- Complete the remaining website pages.
- Implement CSS styling to improve the visual appearance and responsiveness of the website.
- Add JavaScript functionalities for improved interactivity and user experience.
- Integrate backend components where required.
- Optimize website performance and responsiveness across devices.
- Conduct comprehensive testing for functionality, usability, and compatibility.
- Implement security measures and prepare the website for deployment.
- Review the website based on stakeholder feedback and perform final refinements before launch.

The objective of the next phase is to transform the current HTML framework into a fully functional, responsive, secure, and production-ready website.
